

-----PRESS RELEASE-----

ELTA GO 'BACK TO SCHOOL' WITH NEW RANGE AT H&V '09

Elta Fans will be taking an innovative approach to the introduction of their new range of intelligent ventilation products at the H&V '09 exhibition, with a typical school environment used to demonstrate the 'Demand and Control' approach to ventilation.

With sustainability and energy efficiency an increasing focus for the built environment, the box fan Quietflow DCV range has been developed with brand new controls from Elta. The control package will ensure that the ventilation provided combines maximum efficiency with minimum energy consumption.

The Elta stand (HB32, Hall 19) will feature a 'classroom' theatre area where Elta's specialists will demonstrate the new range and how it may operate in a typical school day, from 'first bell' through to home time. Working examples from the range of box fans will also be on show, with a series of panels to illustrate how different sensors can be used to intelligently control the ventilation system.

Elta Fans new Quietflow DCV Unit launching at the H&V09 show

A section of the stand introduces a 'Back-to-School' within the stand following the successful use of Elta's products in a number of prestigious educational applications. These including one of the most energy efficient buildings ever built by Derbyshire County Council.

The 210 pupil Herbert Strutt Primary School in Belper, Derbyshire, features Elta fans along with a series of controllers, room occupancy sensors, timers, switches and thermostats to which the fans are linked. This system ensures that rather than running constantly, the fans only progressively operate in those rooms that are occupied, thereby providing significant energy savings.

Also exhibiting at the H&V '09 exhibition will be Elta Fans' sister company Fastlane (stand HA29, Hall 18/19) who will be introducing newly updated products and brochures including the increasingly popular heat recovery wheel and domestic HRU's, to ensure maximum energy efficiency in all buildings.

At the RAC '09 show, running alongside H&V'09, will be yet another company from the Elta Group. Hydor (stand G33, Hall 17) who will be focusing on their capabilities in the design, manufacture and supply of air circulation fans, ventilation products and systems employed in refrigeration, industrial, agricultural and many other applications throughout the world.
